

**Construction Trades License Training Corp.**  
**Learning Objectives for Licensed Master Plumbers and Licensed Master Fire Suppression Contractors**  
**Updated March 2025**

Thank you for participating in the Construction Trades License Training Corp. NYC Department of Buildings-mandated license renewal course for master plumbers and master fire suppression contractors. The goal of this course is to meet the NYC DOB [course outline](#) and, specifically, to meet these objectives below:

1. **Identify** the legal and ethical responsibilities of licensed master plumbers and master fire suppression contractors, including license usage, insurance requirements, and reporting obligations, as outlined by NYC DOB regulations.
2. **Demonstrate** compliance with site safety and training requirements by accurately distinguishing between valid and invalid OSHA certifications and identifying the necessity of a site safety manager for different job sites.
3. **Evaluate** proper procedures for handling standpipe and sprinkler system modifications, including the required permits and contractor qualifications, to ensure legal and safe installations.
4. **Interpret** Local Law 152 of 2016 requirements by determining when and where gas piping inspections are required in NYC buildings.
5. **Evaluate** ethical decision-making in professional practice by identifying unlawful activities, such as offering bribes to inspectors or installing deceptive fire protection equipment and proposing appropriate legal actions.

In assessing your understanding of the course materials and to reach these learning objectives, you will be required to take a knowledge check at the end of the course.
